# Model FKB8735801

## Windows 95Keyboard with Pointing Device

### FEATURES

- **Windows 95, 104 Key, Keyboard**
- **"Built-In" Serial Pointing Device**
- **AT and PS/2 Keyboard Connections**

$C \in$

## DESCRIPTION

**Windows 95® Keyboard Features Integrated Pointing Device**

Targeting computing environments where desktop space is limited, Fujitsu Takamisawa America, Inc. offers a Windows® 95 keyboard with the added convenience of an integrated pointing device.

The FKB8735-801 "ValuePlus" keyboard series features the standard Windows 95 104-key layout with a two-button pointing device embedded above the inverted-T cursor keys. Despite the addition of the pointing device, the keyboard's footprint design is approximately 22% smaller than other desktop keyboards.

The two-button pointing device is a proprietary design developed by Fujitsu. It is compatible with the Windows and Windows 95 Mouse driver. A "navigation dome" controls the cursor's direction and rate of speed utilizing Fujitsu's patented magnetic sensor technology.

Two smaller buttons function as left- and right- mouse buttons. Because the sensors operate using a non-contacting technology, there are no moving parts to maintain or wear out.

The keyboard uses membrane switch technology and features ultra-silent, soft tactile keyswitch feedback. It has a full-travel 3.8 mm keystroke, and a service life of over 10 million operations. A single cable off the back of the keyboard splits into a 9-pin serial connector to attach the pointing device to a COM port, and a circular DIN keyboard connector. A PS/2 keyboard connector adapter is included for plugging the keyboard into a standard DIN AT keyboard connector.

Fujitsu Takamisawa America's ValuePlus keyboard is manufactured to ISO9002 standards and meets FCC, UL, CE, and CSA requirements.
