

# Model SPORTSTER56KI

## FaxModem for the PC

### FEATURES

- **High Speed Downloads over Regular Phone Lines**
- **Major Internet Providers Support x2™ Technology**
- **Software Upgradable for Easy Updates**
- **Automatically Selects x2 or V.34/33.6 Kbps**

### DESCRIPTION

Sending e-mail is easier than mailing a letter. Finding facts on the World Wide Web is quicker than going to the library. Working on a spreadsheet at home is better than going to the office on a weekend. And a Sportster 56K modem lets you do it all - simply, reliably... and faster than ever before!

With your computer, your Sportster modem, and an ordinary analog phone line, the Web page that used to take a minute to download could be complete in about 30 seconds. Read online newspapers, check out the latest weather maps, hear live audio broadcasts, even see video clips nearly twice as fast as with a 28.8 modem - or even

faster with compression. (Uploading to your provider - sending the few keystrokes of a Web address or the mouse clicks that link you to new pages - happens at conventional modem speeds, up to 28.8 Kbps.)

Hundreds of online/Internet service providers including America Online, CompuServe, IBM Global Network, MCI, NetCom and Prodigy, serving more than 18 million subscribers, support x2 Technology.

And the Sportster 56K modem you buy today still talks to ordinary modems at speeds up to 33.6 Kbps. You can still connect with other modems just like you did before.

### SPECIFICATIONS

#### Internal Bus type

ISA8

#### Platform(s) supported

PC

#### Highest data speed

(modem)56K

#### Highest fax speed

(Send)14.4

#### Highest fax speed

(Receive)14.4k
