

OEMC-Drive Cage

INSTALLATION INSTRUCTIONS

The OEMC-DC will install in a variety of orientations, depending on the mounting hole configuration used. For the layout of the mounting holes please see the assembly drawing on the back of this page.

To install drives in the OEMC-DC first install the shock mounting kits as shown in the figure below.

Then install the drives in the shock mounts, and connect a grounding strap from the grounding post on the side of the unit to the drive.
